EDUCATION

University of Rochester

Rochester, New York

Master of Computer Science

5/2026

Bachelor of Science, Computer Science, High Distinction

5/2025

GPA: 3.70 out of 4.00 - Listed on the Dean's List.

Programming Language: TypeScript, JavaScript, Python, Java, C, Rust, Go, C++, C#, CSS, HTML, Swift.

Courses: Artificial Intelligence, AGI, Deep Learning, Data Mining, Natural Language Processing, Web Development, Computer Network, Mobile App Development, Parallel & Distributed Systems, Database

Awards and Prizes: MetaCTF top winner (6th out of 1300), Dean's Scholarship, Master Scholarship

PROFESSIONAL EXPERIENCE

Onc.AI - Software Engineer (Contract)

6/2025 – 10/2025

- Developed responsive web dashboards for clinical and competitor analytics using React, TypeScript, HTML5, and CSS3, integrating real-time updates and Python RESTful APIs (FastAPI).
- Built asynchronous FastAPI services with RAG LLMs and Agentic LLM services utilizing LangGraph and Pytorch with streaming endpoints (SSE) to handle high-frequency updates in real time with strong consistency.
- Designed SQL-based data models for clinical datasets (PostgreSQL), implemented stored queries, and built NoSQL pipelines for semi-structured competitor data.
- Added Jest and React Testing Library coverage for UI components and Cypress tests for core user flows.
- Deployed the system on GCP and continuously updated to perfect the application utilizing CI/CD pipelines.

University of Rochester - Technical Assistant II - Psychology Lab

11/2024 – 5/2026

- Built AI-driven experimental gaming platforms simulating human interaction to study social and cognitive behavior, developing adversarial game bot agents to engage with research participants in controlled settings.
- Engineered multi-user web systems using React, Node.js, and Phaser.js, Jest, and Pytest integrated with Firebase/Firestore for real-time synchronization of participant sessions and behavioral data.
- Designed experiment UIs with attention to accessibility (ARIA roles, keyboard navigation) and performance.

Salesforce - Software Engineer Intern

5/2024 – 8/2024

- Implemented internal data quality reports and dashboards using Python and SQL to measure fidelity, tagging completeness, and metadata consistency across millions of knowledge base entries.
- Designed a migration engine that migrates legacy Java-based Knowledge V1 to Lightning Knowledge.
- Worked with data engineering and QA teams to ensure knowledge base article formatting, meta-tagging, and metadata (fields, topics, categories) aligned with best practices for AI grounding and retrieval.
- Contributed to CI/CD integration of data validation checks and wrote tests in Jest to ensure correctness across deployments.

Rochester Human Computer Interaction Lab - Research Assistant Intern

2/2023 – 11/2023

- Led end-to-end development of an AI teaching assistant tool for research use, utilizing React, TypeScript, Node.js, Redux, npm, and CSS pre-processors (LESS) with a modular architecture for maintainability.
- Utilized Redux for an advanced state management system to work with complex HOC architecture.
- Deployed the system for active research use, enabling faculty and researchers to streamline experiment workflows, automate interaction testing, and accelerate data collection and analysis ([Link: Research Link](#))

University of Rochester CDCS system - Frontend Lead

11/2023 – 5/2025

- Designed AI-powered, multi-modal search heuristics (combining course text, metadata, and historical enrollment trends) for a course recommendation system using Node.js, React, Redux, JavaScript.
- Directed Agile sprints with cross-functional teams, delivering adaptive, SEO-optimized UI components
- Scaled system to 2000+ active users and secured official university endorsement ([Link: Melcourse](#))

Special Interest Housing - Web Manager

1/2023 – 5/2025

- Led the full-stack redevelopment of the Anime Interest Floor website using React, JavaScript (ES6), HTML5, and CSS3, achieving a 23% increase in engagement and applications
- Designed mobile-first layouts and ensured browser compatibility, accessibility, and frontend performance.
- Deployed and maintained the website using GitHub Pages and CI/CD pipelines, ensuring continuous delivery and version control for rapid content updates ([Link: Special Interest Housing](#))
