EDUCATION

University of Rochester

Master of Computer Science

Bachelor of Science, Computer Science, High Distinction

Rochester, New York

Anticipated 6/2025

5/2025

Major GPA: 3.92 out of 4.00 - Listed on the Dean's List. Awarded the Dean's Scholarship.

Relevant Courses: Parallel and Distributed Systems, Computer Networks, Mobile App Development, Web Programming, Web Development, Database, Data Structures and Algorithms, Data Mining

Programming Language: JavaScript, TypeScript, Python, Java, C, C++, C#, Rust, Go, CSS, HTML, Swift

Frameworks, Tools, and IDEs: Node.js, React v16+, Flask, Webpack, OpenAI Codex, GitHub Copilot, React Native, VSCode, Xcode, Vim

PROFESSIONAL EXPERIENCE

Onc.AI – Software Engineer (Contract)

6/2025 – Current

- Designed and deployed a real-time competitor monitoring software using Node.js, React, and Python that supported parallel user access to live variable data to ensure strong consistency
- Built AI-driven data processing pipelines with Langgraph, OpenAI API, and local LLMs to deliver actionable insights in near real time.
- Optimized operating workflows, improving speed and saving tens of thousands of dollars in operational costs

Salesforce – Software Engineer Intern

5/2024 – 8/2024

- Designed, coded, and tested responsive, accessible UI components with Node, React, Lightning, HTML, and CSS, collaborating with Design, Product, QA, and DevOps teams across multiple regions
- Delivered a KPI dashboard integrated into a distributed backend, enabling scalable performance monitoring
- Migrated legacy Java-based Knowledge V1 to Lightning Knowledge, modernizing infrastructure for thousands of concurrent users globally
- Recognized in the top 10% of interns for engineering quality and project delivery speed

StartUp (Vietnam) - Software Engineer (Remote)

8/2023 – 1/2024

- Built new features in JavaScript, Node.js, and React.js for a seasonal job posting web application
- Engineered reusable UI and shipped high-quality products by collaborating with cross-functional teams
- Developed RESTful APIs and key metrics monitoring tools to ensure proper governmental compliance
- Led a backend migration from Firebase to Amazon S3, significantly improving storage efficiency and retrieval speeds, and scaling the code base

University of Rochester – Research Assistant

1/2023 – 11/2023

- Led the frontend development of an AI-powered teaching assistant tool for research use, leveraging React, SQL, Kubernetes, and Node.js to engineer reusable UI and high-quality code.
- Developed drag-and-drop AI modules that can help teachers to intuitively create learning components while rapidly iterating on feedback to deliver polished, high-impact features under deadlines (Link: [Research](#))

SELECTED PROJECT

Melcourse – University of Rochester CDCS system

9/2023 – 4/2024

- Collaborated to implement new features for a course scheduling platform using TypeScript, React (Next.js)
- Designed AI-based search algorithms with intuitive heuristics that help users can search for courses easily
- Implemented responsive, scalable UI components and iterated on designs in collaboration with the UI teams
- Scaled the platform to 1200+ active users while securing official university endorsement (link: [Melcourse](#))

AIF Landing Page – University of Rochester Special Interest Housing

1/2022 – 5/2025

- Designed and built the organization's landing page using React, JavaScript, and Node.js, prioritizing performance, accessibility, and mobile-first responsiveness
- Implemented reusable, scalable UI components and partnered with the design team to iterate from wireframes to production
- Improved load time and basic SEO, driving +23% site engagement and +11% applications submitted through the site (Link: [AIF](#))
